GAMAKATSU NEW SIZES IN THE EWG MONSTER

Gamakatsu are the benchmark in high quality, chemically sharpened Japanese steel fishing hooks and they've added two new sizes to the EWG Monster worm hook range. The new sizes offer more versatility and build on the already available 7/0 EWG Monster. A 5/0 and 6/0 now complete the range of the strongest worm hook on the market.

The EWG Monster was designed for only the largest plastics and features extra heavy duty wire, an inline hook point and an impressive black nickel finish. Coupled with Gamakatsu's chemical sharpening procedure, the EWG Monster has the best hook setting power, crucial when throwing big baits for large fish.

The EWG Worm hook allows anglers to rig their lures in the traditional way with the hook point well exposed or weedless. This offers incredible versatility and they can be used effectively in areas of heavy weed or timber often found when chasing iconic species such as barramundi.

They will also be perfect in shallower water for offshore species such as snapper and kingfish with a slow sink offered by the unweighted hook.

The Gamakatsu logo is written in a large, blue, cursive script font. A registered trademark symbol (®) is located at the top right of the word.
