## Dangan Braid

Majorcraft introduces a new 8-strand braided line. The Dangan Braid's original yarn is a super strong, polyethylene fibre made by Tobyto, then custom twisted in a Japanese factory to develop a braid with a lower stretch, higher sensitivity.

The Dangan comes in a range of braid strengths and is as user friendly for beginners as it is heavy duty for professional anglers. The braid has a super smooth, slippery surface coating that reduces friction on guides and the reel, which increases casting distance and enables better line lay. Available in multi-colour type with ten metre increments, which is important for general jigging and offshore work.

In Japanese, Dangan means bullet: this is one fierce angler's tool.

**Weight Range:** 8 to 50lb | **PE:** 0.6 to 3.0 | **Lengths:** 150m and 300m
